since the introduction of the japanese beetle *popillia japonica* coleoptera scarabaeidae to the united states in 1916 the pest has had a long history of range expansion and is now established in at least 28 states in 2014 *p japonica* was found for the first time in continental europe with detections in northern italy and subsequently southern switzerland most recently a population was confirmed near vancouver british columbia canada adult beetles are quite opportunistic and readily colonize and damage over 300 host plant species ranging from field crops maize soybean to horticultural crops wine grapes raspberry apple and ornamentals such as linden trees the larval grub stage actively feeds on root tissue of several turf species utilizing turf on golf courses residential lawns perennial meadows and potentially turf growing within the trellis rows of vineyards and orchards thus urban as well as agricultural regions can harbor infestations facilitate

spread and thus trigger substantial insecticidal sprays to suppress populations because of the damage potential the beetle has been designated a quarantine pest in some regions e.g. California, U.S. and EU countries in response to the risk to plant health in Europe. A collaborative international research group IPM Popillia was created with the aim to coordinate and facilitate research activities among multiple countries. Leaders from this group and the U.S. will serve as guest editors to encourage timely publication of research to accelerate our understanding of *P. japonica* biology and management. One of the challenges to effective management of *P. japonica* is that few if any soil applied or foliar insecticides labeled for larval and adult stages respectively are approved for use in some countries or are currently being reviewed by regulatory agencies. This is particularly true in several EU countries as this pest continues to expand its range. It is imperative to investigate alternatives to chemical control. Moreover, an improved understanding of *P. japonica* biology, behavior, and ecology is necessary to develop a solid foundation for future pest management programs. We believe this research topic will prove to be a valuable venue for publishing novel research on a variety of *P. japonica* research priorities in the near future. We look forward to new submissions in the topic areas highlighted below. Article types: This research topic welcomes several types of articles including original research, opinion, perspective, mini review, and review articles that examine all aspects of *P. japonica* invasion, ecology, and management. Potential contributions include but are not limited to: early detection, monitoring, and spread rates of *P. japonica* larval/adult populations; invasion biology and population ecology; dispersal of *P. japonica*; human aided or natural pathways of pest introduction; range expansion within the context of global climate change; behavioral studies; chemical ecology of insect-plant interactions; larval/adult feeding injury; measuring the impact on high value crops; novel integrated pest management (IPM) solutions with low environmental impact; natural antagonists and biological control agents; and trophic interactions. Synergies between biological control and pest resistant varieties; novel genetic/genomics studies on *P. japonica* or bacteria, entomopathogenic fungi, nematodes, and other biological control agents; environmental and non-target impacts of *P. japonica* damage and IPM alternatives; economic assessment of *P. japonica* invasions and IPM solutions. We are also pleased to have Dr. Daniel Potter, University of Kentucky, U.S. serve in an honorary role as topic coordinator and offer advice to the project via his 43 years of experience and knowledge of *P. japonica* biology and ecology.

A current overview of what is meant by cultural complexity and how archaeologists study the development of complex societies in North America.

This book aims to study the current transformations of higher education in the Brazil, Russia, India, China, and South Africa (BRICS) countries. The conditions imposed by the COVID pandemic exposed many vulnerabilities in higher education systems but also provided valuable lessons that led to the implementation of effective changes. Educational changes are being applied to programmes, projects, practices, and policies with varying degrees of success depending on the context. The needs of students and staff have changed and considerable attention has been given to the effective continuation of all academic activities through the use of technology. Often the nature of higher education and its role in society are being contemplated and ways of sustainable development are being debated. Therefore, contributors from the five BRICS member states present research findings and critical views on the recent development of higher education in their own countries, providing an opportunity for a unified effort and collective input to explore the transformation and reform of higher education. This book is intended for researchers, policymakers, and postgraduate students in higher education, educational governance, and comparative education.
